### Current rates as of July 2024

This table compares electricity costs for an average large commercial customer in the Ava/PG&E service area with an average monthly usage of 223,024 kilowatt-hours (kWh) and average monthly demand of 552 kilowatts (kW). This is based on a representative 12-month billing history for all customers on the B-19S rate schedule for PG&E's and Ava's published rates as of July 2024.

**Generation Rate** is the cost of creating electricity to power your business. The generation rate varies based on your energy provider and the resources included in your energy provider's generation supply.

**PG&E Delivery Rate** is a charge assessed by PG&E to deliver electricity to your business. The PG&E delivery rate depends on your electricity usage but is charged equally to both Ava and PG&E customers.

**PG&E PCIA/FF** The Power Charge Indifference Adjustment (PCIA) is a charge to ensure that both PG&E customers and those who have left PG&E service to purchase electricity from other providers pay the above market costs for generation resources that were procured by PG&E on their behalf. "Above market" refers to expenditures for electric generation resources that cannot be fully recovered through sales of these resources at current market prices. PG&E acts as a collection agent for the Franchise Fee (FF) surcharge, which is levied by the California Public Utilities Commission on behalf of cities and counties in PG&E's service territory for all customers. PG&E bundled customers pay the PCIA and FF fees associated with the most currently available vintage year. PG&E charges Ava customers the PCIA and FF fees based on the year that they transitioned to Ava service. Visit [AvaEnergy.org/rates](https://AvaEnergy.org/rates) for more information.
