Ava Community Energy Net Energy Metering Policy 6.7

Seventh Amended and Restated Net Energy Metering Service Policy

Applicability

This net energy metering (NEM) schedule is applicable to a customer who uses an eligible Renewable Electrical Generation Facility, as defined in PG&E's Electric Schedule NEM (http://www.pge.com/tariffs), within the capacity limits described in PG&E's Electric Schedule NEM that is located on the customer's owned, leased, or rented premises, is interconnected and operates in parallel with PG&E's transmission and distribution systems, and is intended primarily to offset part or all of the customer's own electrical requirements (hereinafter "eligible customer generator" or customer").

This rate schedule is available on a first-come, first-served basis to customers that provide PG&E with a completed PG&E NEM Application and comply with all PG&E NEM requirements as described in PG&E Electric Schedule NEM. This includes customers served by NEMV (Virtual Net Energy Metering), NEMVMASH (Virtual Net Energy Metering for Multifamily Affordable Housing), NEMA (NEM Aggregation) and Multiple Tariff facilities as described by PG&E Electric Schedule NEM.

Definitions

Original Jurisdictions: Cities of Albany, Berkeley, Dublin, Emeryville, Fremont, Hayward, Livermore, Oakland, Piedmont, San Leandro, Union City and the unincorporated area of Alameda County

Customer type definitions:

- Standard Ava NEM: NEM customers who do not fall into the below groups.
- Legacy Municipal NEM: Municipal NEM customers from Ava's original jurisdictions that had an interconnection date between 6/1/2018 and 4/1/2021.
- CARE/FERA Ava NEM: CARE/FERA NEM customers whose systems were interconnected after Ava began providing electric service in the jurisdiction where they are located.

Updated 02.20.19, 06.19.19, 12.16.20, 03.17.21, 10.19.22, 2.14.25, 10.21.26

Rates

All rates charged under this schedule will be in accordance with the eligible customer generator's otherwise-applicable Ava rate schedule (OAS), which includes their rate schedule and Ava service level (i.e. Bright Choice or Renewable 100). An eligible customer-generator served under this schedule is responsible for all charges from its OAS including monthly minimum charges, customer charges, meter charges, facilities charges, demand charges and surcharges, and all other charges owed to Ava or PG&E. Charges for energy (kWh) supplied by Ava, will be based on the net metered usage in accordance with this tariff.

Billing

Customers with NEM service will be billed as follows:

a) Standard Ava NEM customers may choose between a monthly or annual billing plan.

Standard Ava NEM customers will be defaulted to a monthly billing plan where they pay monthly for any net charges not covered by their NEM credits. Those who prefer to pay once a year can opt into the annual billing plan where any net charges are due as part of the April true-up. Customers may select their preferred billing plan once per year before March 1, effective following the next April true-up period.

CARE/ FERA Ava NEM and Legacy Municipal NEM customers must be enrolled in the monthly billing plan.

b) For a customer with Non-Time of Use (TOU) Rates:

Any net consumption or production shall be valued monthly as follows:

If the eligible customer-generator is a "Net Consumer," having overall positive usage over a billing cycle, the eligible customer-generator will be billed or debited in accordance with the eligible customer-generator's OAS.

If the eligible customer-generator is a "Net Generator," having overall negative usage over a billing cycle, any net energy production shall be valued at the OAS plus any additional incentive payment as applicable (e.g. for new installations for CARE/ FERA Ava NEM accounts). The calculated value of any net energy production shall be credited to Ava customers as described in Section (d).

c) For a customer with TOU Rates:

Any net consumption or production shall be valued monthly as follows:

If the eligible customer-generator is a Net Consumer (as defined above) during any discrete TOU period, the net kWh consumed during such period shall be billed or

debited in accordance with applicable TOU period-specific rates/charges, as described in the eligible customer-generator's OAS.

If the eligible customer-generator is a Net Generator (as defined above) during any discrete TOU period, the net kWh produced during such period shall be valued in consideration of the applicable TOU period-specific rates/charges, as described in the eligible customer- generator's OAS, plus any additional incentive payment as applicable (e.g. for new installations for CARE/ FERA Ava NEM accounts). The calculated value of any net energy production during a specific TOU period shall be credited to Ava customers as described in Section (d).

d) Settlement of Ava Charges/Credits:

NEM customers will receive a statement in their monthly PG&E bills indicating any accrued charges for their usage during the current billing cycle. Customers who have accrued credits during previous billing cycles will see these credits applied against current charges.

For customers on a monthly billing plan, any remaining balance is due and must be paid each monthly billing cycle. For customers on an annual billing plan, any remaining balance will appear as a debit on the bill and roll over until the annual true-up in April.

When a customer's net energy production results in a net bill credit over a billing cycle, the value of any net energy production, during the billing cycle, shall be noted on the customer's bill and carried over as a bill credit for use in subsequent billing period(s).

Monthly credits are calculated as follows based on customer type:

Customer Type	Bill Credit per kWh
Standard Ava NEM Customer	Retail*
Legacy Municipal NEM Customer	Retail* + $0.01
CARE/FERA Ava NEM Customer	Retail* + $0.01

**Equivalent to the generation rate you are charged for power received from Ava*

e) Ava Annual True-Up:

During the April billing cycle of each year, all Ava NEM customers will undergo an annual true-up to reconcile their Ava generation charges and credits.

Customers whose energy consumption exceeds their available NEM credits will owe Ava for any outstanding charges. Customers on the annual billing plan will pay all outstanding charges accrued during the year at the April true-up, while customers on the monthly billing plan will owe only the charges incurred during the current billing cycle.

Customers who generated more electricity than they consumed during the preceding 12 months are eligible for an annual true-up credit for their surplus kWh.

Annual true-up credits are calculated as follows based on customer type:

Customer Type	Annual Payout Credit per kWh
Standard Ava NEM Customer	PG&E Net Surplus Compensation (NSC)
Legacy Municipal NEM Customer	Retail* + $0.01
CARE/FERA Ava NEM Customer	Retail* + $0.01

**Equivalent to the generation rate you are charged for power received from Ava*

The credit balance will be determined as of the final date of the customer's March-April billing cycle (i.e. the first bill cycle ending on or after April 1). Customers with a credit balance of less than $100 will receive a rollover credit that will remain on their accounts for future use toward Ava generation charges. Customers with a credit balance of $100 or more will receive a direct payment for the balance. Once the customer's annual surplus kWh are reconciled and converted to an annual credit, either as a rollover credit or direct payment, the customer's accumulated NEM balance from monthly credits is reset to zero.

Customers who close their electric account through PG&E or move outside of the Ava service area prior to the April billing cycle of each year are also eligible for the annual Ava true-up process.

Ava will, at least once each year, conduct an audit of the CARE/FERA NEM customers to ensure that eligible CARE/FERA NEM customers are included in the CARE/FERA Ava NEM program.

f) Return to PG&E Bundled Service:

Ava customers with NEM service may opt out and return to PG&E bundled service at any time. Customers should be advised that PG&E will perform a true-up of their account at the time of return to PG&E bundled service and that PG&E's standard terms for transitional rates apply to customer returns with less than a six-month advance notice, if they have been an Ava customer for 60 days or more.

If any Ava NEM customer opts out of the Ava program and returns to PG&E bundled service, Ava will directly pay the customer for any remaining surplus kWh on the account (using the approach detailed in section e above)..

g) PG&E NEM Services:

All Ava NEM customers are subject to the conditions and billing procedures of PG&E for their non-generation services, as described in PG&E's Electric Schedule NEM and

related PG&E tariff options addressing NEM service. Customers should be advised that while Ava settles balances for generation on a monthly or annual basis, PG&E will continue to assess charges for delivery, transmission and other services. Most NEM customers will receive a separate annual true-up from PG&E for these non-generation services.

Customers are encouraged to review PG&E's most up-to-date NEM tariffs, which are available from PG&E.

h) Aggregated NEM

Per the California Public Utilities Code Section 2827(h)(4)(B), aggregated NEM customers are "permanently ineligible to receive net surplus electricity compensation." Therefore, any excess accrued credits over the course of a year under an aggregated NEM account are ineligible for payment via Ava's annual true-up process as described in section (e). All other NEM rules apply to aggregated NEM accounts.

i) NEM Fuel Cell (NEM FC)

Per the California Public Utilities Code Section a 2827.10(f)(3), NEM fuel cell customers are ineligible to receive net surplus electricity compensation. Therefore, any excess credits accrued over the course of a year under a NEM FC account are ineligible for payment via Ava's annual true-up process as described in section (e).
